### **Explanations/Introduction:**

There can be little doubt that David Jones's (2006) book *A Complete Guide to Native Orchids of Australia including the Island Territories* provides probably the most current and most comprehensive coverage of Australia's native orchids available between one set of covers. However whether, and to what extent, the very substantial taxonomic restructure presented in the book is accepted by the professional botanical community, only time will tell. In the meantime, while many orchid growers will enthusiastically embrace these new taxonomies, many others will exercise their valid right to continue labelling their orchids using the older taxa, waiting for the dust to settle on the scientific debate.

In either regard there are difficulties for users of Jones's book, in their attempt to relate many of these new taxa to older species descriptors. The individual species entries in the text provide no prior taxonomic information whatever; and the index is of limited assistance, and far from complete regarding taxonomic descriptors commonly used over the past decade or so.

For example, looking up *Dendrobium falcorostrum*, one finds in the index "= *Thelychiton falcorostrus*". The reader then must look up *T. falcorostrus* for the relevant page number. However, a reader interested in *Dendrobium bigibbum* var. *compactum* will find no reference anywhere. Inferring from the index entry "*Dendrobium bigibbum* = *Vappodes bigibba*" that one should start looking under genus *Vappodes*, further reading finds *V. lithicola* for which the description matches the orchid known as *D. bigibbum* var. *compactum*.

These tables constitute **my personal attempt** to make David Jones's book more user friendly for those needing to reference the earlier taxa. They present a cross-reference between the taxonomic descriptors in Jones's book and the more commonly used earlier versions, with a direct page reference for each species.

**What this cross reference is not:** These tables are a cross index only - they are not intended to provide information that comprises any part of the content of David Jones's book. Nor is it intended that they provide a comprehensive taxonomic history of any taxon - there are many serious publications and other sources that provide this information. For one such, the reader is directed to Mark Clements & David Jones's "Australian Orchid Name Index" listed in the references below. The easiest way to access this is to do a web search (Google definitely worked) on the title, and download the pdf file so found. The title suggests the list is regularly updated. It should be noted, however, that several of the taxa in Jones's book do not yet appear in this index.

**What this cross reference is:** The purpose of these tables is simply to facilitate access to taxa in Jones's book via those descriptors which have commonly been used by enthusiasts to tag their plants over the last 10 to 20 years.

Users of these tables are invited to forward to me any advice regarding:  
errors or omissions in the tables;  
"earlier" taxa that are so out of date as to warrant exclusion;  
"earlier" common names for taxa in the left columns;  
any other suggestions that may improve the usefulness of the tables.

I do, of course, reserve the right to make the final decision on what to include, exclude, or amend.

### **General Comments:**

Jones's species epithets sometimes differ between the index & the text (eg Index: *Dendrobium callitrophilum* = *Tropilis callitrophila*; Text heading: *Tropilis callitrophilis*). Where this occurs I have tried always to use the text heading species epithet. In a few cases his species epithet spelling differs from that in the Australian Plant Name Index (APNI). In such cases I have tried always to follow APNI.

On page 2 (The Jones "*Dendrobium Alliance*") I have listed the genus *Dockrillia* in the "Earlier Versions" columns, rather than the still earlier *Dendrobium* equivalents.

### General Comments:

I have listed the genus *Dockrillia* in the "Earlier Versions" columns, rather than the still earlier *Dendrobium* equivalents.

### Notes:

1. Earlier texts (eg Lavarack et al, Jones (1988/1993)) state *D. semifuscum* to be a relegated synonym of *D. trilamellatum*. Jones has now introduced two separate species, *Cep. semifuscum* & *Cep. trilamellatum*, which, in the index, he equates to *D. semifuscum* & *D. trilamellatum* respectively.
2. Section *Lichenastrum* (Genus *Davejonesia*): Jones has removed *D. toressae* from his new genus, leaving *D. lichenastrum* & *D. prenticei*, which he divides into 3 species. His photos further confuse, with his new species *aurantiacopurpurea* and *lichenastra* having blooms typical of the striped forms of *D. lichenastrum* & *D. prenticei*, while his new species *prenticei* photo depicts a dull creamy yellow bloom. However, his text indicates all 3 species have similar (variable) blooms. The principal differentiator is leaf shape: *Davejonesia lichenastra* small and round; *prenticei* cylindrical to terete, 25-40 mm long; *aurantiacopurpurea* elongated but "flattish, usually angular, 15-25 x 5-8 mm".
3. In Jones's revised *D. kingianum* (*Th. kingianus*) group of species, previously proposed variants such as *aldersoniae*, *pallidum* & *silcocki* are not acknowledged.
4. In his revised Cooktown Orchid (*D. bigibbum*/*V. bigibba*) group, Jones nowhere acknowledges previous varietal taxa such as *D. bigibbum* var. *bigibbum*, var. *compactum*, var. *superbum*. The relationships in the cross-reference have been extracted from the Australian Plant Name Index.
5. In Jones's revised *D. speciosum* (*Th. speciosa*) group, all the commonly recognised *D. speciosum* varietal names appear as separate species. He also introduces a further 5 new species in the *Th. speciosa* complex: *Th. biconvexus*, *coriaceus*, *epiphyticus*, *rupicola*, *spectabilis*. There has also been a subsequent paper by Adams, Burke & Lawson which revises the *D. speciosum* group along the "more classical" pre-2006 lines. This paper largely retains the pre-2006 distribution of species, but adds two new varieties in the region ascribed to *D. speciosum* var. *capricornicum*, namely *camarvonense* & *blackdownense*; they also ascribe var. *curvicaule* solely to the Mackay region, introducing a new variety *boreale* for the northern region previously ascribed to *curvicaule*. To better understand the present real confusion associated with the various revisions of *D. speciosum*, the reader is advised to take a map such as that in the paper by Adams et al, & also mark in the new Jones distributions as well as the older "classical" distributions.  
In the table below, the "classical" varieties as listed in the "Earlier Versions" columns are matched against the Jones (2006) species. The equivalences are based on the "classical" geographic distributions, not on botanical comparisons; ie, on how they might have been labelled for show before 2006.  
For completeness, the table on page 6 compares the "classical", Jones (2006), and Adams et al (2006) taxonomies - again based solely on geographical distribution.
6. Jones has created genus *Cepobaculum* to include part of *Dendrobium* Section *Spatulata* in what he calls the "Tea Tree Orchids". As well as *D. carronii* and the variants on *D. canaliculatum*, he includes in this genus *Cep. johannis*, *semifuscum* & *trilamellatum*. See also Note 1.
7. *Dockrillia sulphurea*: See Jones & Clements new species in "Australian Orchid Review" 71 (3), 2006. It would previously have been probably regarded as a variant of *Dockrillia calamiformis*.
8. *XVappaculum vinicolor*: Jones's text defines this natural hybrid as *V. lithicola* x *Durabaculum discolor* (*D. bigibbum* var. *compactum* x *D. discolor*). But he defines no species *Dur. discolor*. Presumably he means *Dur. undulatum*.
9. The *Dendrobium aemulum* group: Lavarack et al note *D. aemulum* is a very variable species with a distribution from SE NSW to NE Qld. They also list *D. callitrophylum* (syn. *D. aemulum* var. *callitrophylum*) from NE Qld as having a darker flower (yellow-green to apricot) than other forms of *D. aemulum*. Jones (1988) lists 5 variants of *D. aemulum*, including the darker flowered one. Jones (2006) appears to have separated these 5 forms into separate species. While I can find no direct documentary evidence of this, it seems irrefutable when comparing the text of the above references.

**Return to  
Contents**

### Notes:

1. The Jones (2006) index indicates *Luisa teretifolia* = *L. atacta*. He appears to have expanded *L. teretifolia* into two species, *L. atacta* & *L. corrugata*, though I can find neither of these species in my reference searches. The distinction between the two new species appears to be based on: distribution (*L. atacta* in Qld and *L. corrugata* in the NT); and that *L. corrugata* has racemes with overlapping sparsely hairy bracts, sparsely hairy sepals, and differences in the labellum.
2. *Microtatorchis clementsii* is not listed in the Australian Plant Name Index. See:  
Jones, D.L. & Gray, B. (2006) *Microtatorchis clementsii* (Orchidaceae), a new generic record and new species from Australia. The Orchadian 15(5): 201-202, Fig. 1
3. *Sarcochilus argochilus* is not listed in the Australian Plant Name Index. See "*Sarcochilus argochilus*" D.L.Jones et M.A.Clements, Austral. Orch. Rev. 71(2): 21-23, t. (2006)
4. Regarding the group *Sarcochilus australis*, *S. gunnii*, *S. olivaceus*, *S. parviflorus*:  
Jones (2006) lists *S. australis* and *S. parviflorus* as separate species; the index lists *S. olivaceus* = *S. parviflorus*, & has no entry for *S. gunnii*.  
Jones (1988) has *S. olivaceus* & *S. australis* as separate species, and lists *S. parviflorus* = *S. australis*, with no entry for *S. gunnii*.  
Dockrill has *S. australis*, *S. olivaceus* & *S. parviflorus* as separate species, and lists *S. gunnii* = *S. australis*.
5. Jones (1988) & Dockrill have *Taeniophyllum cymbiforme* as a synonym of *T. muellerii*; Jones (2006) has it as a separate species
6. Jones (1988) & Dockrill distinguish between *Taeniophyllum flavum* & *T. lobatum*, based on: distribution (the latter being very localised); and the flowers on *T. flavum* open widely while those on *T. lobatum* hardly open. Jones (2006) appears to have consigned these two taxa to the same species (*T. lobatum*), though his description of "flowers ... opening widely" seem most relevant to the former *T. flavum*.
7. Jones (1988) & Dockrill have *Taeniophyllum wilkianum* as a synonym of *T. muellerii*; Jones (2006) has it as a separate species

### Notes:

1. Genus *Oberonia*:

Both Jones (1988) and Dockrill place *O. palmicola* as a synonym of *O. titania*, which has distribution from NE Qld to NE NSW (Iron Range to Macleay River), as well as Norfolk Island and (Dockrill) Lord Howe Island and New Caledonia. Of the synonymy Jones (1988) states: "... recent research has shown that *O. titania* and [*O. palmicola*] are one and the same." Despite the above, Jones (2006) reinstates *O. palmicola* as the Australian orchid; he describes *O. titania* as a separate species found only on Norfolk Island and in New Caledonia. Of the Australian orchid *O. titania/O. palmicola*, both Jones (1988) and Dockrill ascribe a similar distribution range as noted above. However, Jones (2006) ascribes *O. palmicola* a much reduced distribution range of SE Qld to NE NSW (Gympie to Kendall, which is a little south of the latitude of Tamworth). He also introduces two new reddish flowered species, *O. crateriformis* and *O. rimachila*. These may possibly comprise the northern range of his former Australian *O. titania*. However, I can find no documentation to support this supposition.

2. *O. attenuata*: Jones (1988, 2006) states only one plant of this species has been found - in the Mossman Gorge. Dockrill ascribes it a distribution from the Johnstone River to the Bloomfield River.

3. *O. complanata*: Jones (1988) and Dockrill ascribe this species a similar distribution range, roughly from Iron Range in N Qld to Lismore.

Jones (2006) gives *O. complanata* the common name of "Southern Green Fairy Orchid" and ascribes it a distribution from Gympie in SE Qld to Lismore.

He also introduces a "Northern Green Fairy Orchid", *O. flavescens*, with a distribution from Iron Range in N Qld to about Proserpine. I can find no supporting documentation, but it seems reasonable to assume that *O. flavescens* was previously the northern form of *O. complanata*.

### Notes:

1. The table below compares the "classical" *D. speciosum* taxonomy with the two most recent reviews by Jones (2006) and Adams et al (2006). These comparisons are based entirely on reported geographical occurrence for each of the taxa. Note 5 on page 2 also relates to this table. It would help to read this table in conjunction with the map from p 235 of Adams et al.
2. In a number of examples, all three sources agree approximately on distribution ranges. In these cases I have made no attempt to incorporate fine distinctions at the boundaries of distributions.
3. For ease of comparison, this table is not arranged alphabetically. Rather, it is arranged geographically, from the most southern occurrences northward. **NB. If this table is sorted, it will not be possible to re-sort back into the original order.**
4. In some cases entries are apparently repeated, due to overlap or inclusion of regions depending on which author's version is being considered. **In these cases, the primary variety/species considered in the particular row is highlighted in red for comparison with the other versions.** That line of the table indicates how the highlighted taxon fits with the other versions.

Pre-2006 Versions		Adams et al (2006) Version		Jones (2006) Versions			Comments
Genus	Species	Genus	Species	Genus	Species	Page	
Dendrobium	speciosum	Dendrobium	speciosum				Jones appears to have no equivalent to the broad and inclusive " <i>D. speciosum</i> " descriptor. Each variety is now allocated its own species.
Dendrobium	speciosum var. speciosum	Dendrobium	speciosum var. speciosum	Thelychiton	speciosus	409	Distribution NSW from Victorian border to north of Newcastle.
Dendrobium	speciosum var. speciosum	Dendrobium	speciosum var. speciosum	<b>Thelychiton</b>	<b>epiphyticus</b>	410	Very small pocket of distribution NSW south of Sydney (Robertson to Cambewarra), within the <i>T. speciosus</i> range.
Dendrobium	speciosum var. hillii	Dendrobium	speciosum var. hillii	Thelychiton	tarberi	412	All versions seem to agree - distribution from south of Newcastle to Queensland around Conondale slightly north of Brisbane.
Dendrobium	speciosum var. grandiflorum	Dendrobium	speciosum var. grandiflorum	Thelychiton	rex	411	All versions seem to agree - distribution from slightly north of Brisbane to just south of Rockhampton.
Dendrobium	speciosum var. capricornicum	Dendrobium	speciosum var. capricornicum	Thelychiton	capricornicus	409	Classical var <i>capricornicum</i> includes all Queensland regions adjacent to the Tropic of Capricorn. Both Jones & Adams et al ascribe it only to the region around Rockhampton.
Dendrobium	speciosum var. capricornicum	Dendrobium	speciosum var. blackdownense/ var. carnarvonense	<b>Thelychiton</b>	<b>coriaceus</b>	410	Dist. Qld. (Blackdown Tableland to Carnarvon Gorge & Mt. Moffat). See also the entries for Adams et al <i>D. blackdownense</i> & <i>D. carnarvonense</i> .

Pre-2006 Versions		Adams et al (2006) Version		Jones (2006) Versions			Comments
Genus	Species	Genus	Species	Genus	Species	Page	
Dendrobium	speciosum var. capricornicum	<b>Dendrobium</b>	<b>speciosum var. blackdownense</b>	Thelychiton	coriaceus	410	Both Jones & Adams et al regard the inland forms of <i>capricornicum</i> to be different from the coastal form. Adams et al also differentiate between plants from the two inland areas.
Dendrobium	speciosum var. capricornicum	<b>Dendrobium</b>	<b>speciosum var. carnarvonense</b>	Thelychiton	coriaceus	410	Both Jones & Adams et al regard the inland forms of <i>capricornicum</i> to be different from the coastal form. Adams et al also differentiate between plants from the two inland areas.
Dendrobium	speciosum var. curvicaule	Dendrobium	speciosum var. curvicaule/ var. boreale	<b>Thelychiton</b>	<b>rupicola</b>	411	Dist. Qld. (Mt. Windsor Tableland, Atherton Tableland to Mt. Elliot, possibly S. to near Sarina), approx. classic <i>curvicaule</i> range if the extension from Mt Elliot (just S of Townsville) to Sarina is included.
Dendrobium	speciosum var. curvicaule	Dendrobium	speciosum var. curvicaule	<b>Thelychiton</b>	<b>spectabilis</b>	412	Very small pocket of distribution Qld. (Mountains around Eungella); small part of classic <i>curvicaule</i> range. Jones appears not to allocate any variant to the wider area around Mackay covered by the classic <i>curvicaule</i> or the Adams et al <i>curvicaule</i>
Dendrobium	speciosum var. curvicaule	<b>Dendrobium</b>	<b>speciosum var. curvicaule</b>				Adams et al reserve the variety <i>curvicaule</i> for plants from the region NE of Proserpine S to St. Lawrence, including Jones's small <i>T. spectabilis</i> pocket. This area appears not to be included in Jones's taxa except for the <i>T. spectabilis</i> pocket.
Dendrobium	speciosum var. curvicaule	<b>Dendrobium</b>	<b>speciosum var. boreale</b>	Thelychiton	rupicola	411	Adams et al regard the northern variant of <i>curvicaule</i> as distinct from that around Mackay, and have described <i>boreale</i> as a new variety. Dist: Annan River (near Cooktown) to Mt Elliot (S of Townsville).
Dendrobium	speciosum var. curvicaule	Dendrobium	speciosum var. boreale	<b>Thelychiton</b>	<b>curvicaulis</b>	410	Jones's <i>T. curvicaulis</i> lies completely within the northern range of the classic <i>curvicaule</i> , and within the range of his <i>T. rupicola</i> . Dist: in or near rainforests from Mossman (N. of Cairns) to Paluma (N. of Townsville).
Dendrobium	speciosum var. curvicaule	Dendrobium	speciosum var. boreale	<b>Thelychiton</b>	<b>biconvexus</b>	409	Very small pocket of distribution within the classic far northern range, near Cooktown. Dist. Qld. (Mt. Windsor Tableland, Mt. Amos, Mt. Finnigan)
Dendrobium	speciosum var. pedunculatum	Dendrobium	speciosum var. pedunculatum	Thelychiton	pedunculatus	411	All versions seem to agree broadly - far northern region, typically west of the ranges.
